

Chapter 5: Lists and Tables in HTML

A. Multiple Choice Questions (MCQs)

- 1) An _____ is a numbered list.
(a) Ordered List (b) Unordered List (c) Both (a) and (b)
Ans: (a) Ordered List
- 2) The _____ property specifies the type of list item marker in an Ordered or Unordered List.
(a) List-Style-Type (b) List-Style-Image (c) None of these
Ans: (a) List-Style-Type
- 3) A list within a list is known as a _____.
(a) Ordered List (b) Unordered List (c) Nested List
Ans: (c) Nested List
- 4) Which tag is used for definition description?
(a) <DT> (b) <DL> (c) <DD>
Ans: (c) <DD>

B. Write T for True and F for False

- 1) Lists do not make your webpage look attractive. Ans: F — False
- 2) <DT> and <DD> are the tags of a Definition List. Ans: T — True
- 3) You cannot add a caption to a table. Ans: F — False
- 4) The spaces between the cells of a table are fixed. Ans: F — False

C. Fill in the Blanks

- 1) Each list item starts with the _____ tag. Ans:
- 2) A _____ list is a bulleted list. Ans: Unordered
- 3) To insert a table, use the _____ tag. Ans: <TABLE>
- 4) A _____ tag is used to create a Definition List. Ans: <DL>

D. Match the Following

- | Column A | Column B |
|------------|-------------------------------------|
| 1) | (a) Used to insert a table |
| 2) <TABLE> | (b) Ordered list |
| 3) <DL> | (c) Used to create a row in a table |
| 4) <TR> | (d) Definition list |

Answers:

1. — (b)
2. — (a)
3. — (d)
4. — (c)

E. Very Short Answer Questions

- 1) Differentiate between and tags.
Ans:
a) creates a numbered list. It starts with the tag.
b) creates a bulleted list. It starts with the tag.
- 2) Explain the different attributes of the <TABLE> tag.
Ans: The important table tags are:
a) Border: Sets the table border.
b) Border-spacing: Sets the space between table cells.
c) Width and Height: Set the size of the table.
d) Padding: Sets the space between the border and the content of a cell.

F. Short Answer Questions

1) Write a short note on Nested Lists.

Ans: A list created within another list is called a Nested List. Ordered and unordered lists can be nested together. A complete or is written inside an tag.

2) State the importance of a Definition List.

Ans: Definition Lists are used to display terms and their definitions. They use three tags:

- a) <DL> — Definition List
- b) <DT> — Definition Term
- c) <DD> — Definition Description

G. Long Answer Questions

1) How do you create a table?

Ans: To create a table in an HTML webpage, follow these steps:

1. Type the opening <TABLE> tag with the attributes.
2. Type the opening <TR> tag to create a row with the attributes.
3. Type the <TH> tag and enter the table heading.
4. Close the heading using </TH>. Repeat to add more headings.
5. Close the row using </TR>.
6. Type another <TR> tag to create a new row.
7. Type the <TD> tag and enter the table data.
8. Close the cell using </TD>. Repeat to add more cells.
9. Close the row using </TR>.
10. Finally, close the table using </TABLE>.

Example:

```
<table border="1">
  <tr>
    <th>Name</th>
    <th>Class</th>
  </tr>
  <tr>
    <td>Aman</td>
    <td>8</td>
  </tr>
</table>
```

2) Which property is used to set the spaces between the table cells?

Ans: The border-spacing property is used to set the space between the borders of adjacent table cells.

Syntax:

```
border-spacing: value;
```

3) How do you set the caption of a table?

Ans: The <CAPTION> tag is used to add a caption to a table. The caption-side property is used to place the caption at the top or bottom of the table.

Example:

```
<table border="1">
  <caption>Student Information</caption>
</table>
```

Additional Questions and Answers

1) Explain the different types of HTML lists.

Ans: HTML provides three main types of lists:

1. Ordered List: Displays items in a numbered or lettered order. It uses the `<OL>` tag.
2. Unordered List: Displays items using bullets. It uses the `<UL>` tag.
3. Definition List: Displays terms and their descriptions. It uses `<DL>`, `<DT>`, and `<DD>` tags.

2) Differentiate between `<TH>` and `<TD>`.

Ans:

<code><TH></code>	<code><TD></code>
Creates a table heading cell.	Creates a table data cell.
It is generally displayed in bold text by default.	It normally displays ordinary data.

3) Differentiate between padding and border-spacing.

Ans: Padding: Sets the space between the border of a cell and its content.

 Border-spacing: Sets the space between the borders of adjacent cells.

4) Differentiate between `<DT>` and `<DD>`.

Ans: `<DT>`: Defines a term in a definition list.

`<DD>`: Defines the description of that term.

5) What are the uses of the width and height properties?

Ans: The width property sets the width of a table, while the height property sets its height.

6) What is the purpose of the text-align property?

Ans: The text-align property sets the horizontal alignment of text in a table. Its values include left, center, and right.

7) What is the purpose of the vertical-align property?

Ans: The vertical-align property sets the vertical alignment of text in a table. Its values include top, middle, and bottom.

8) Explain the important CSS properties used with tables.

Ans: Important CSS table properties include:

- Border: Sets the table border.
- Border-spacing: Sets the space between adjacent cells.
- Border-collapse: Collapses or separates adjacent cell borders.
- Width and Height: Set the size of a table.
- Padding: Sets the space between the cell border and its content.
- Text-align: Sets horizontal text alignment.
- Vertical-align: Sets vertical text alignment.
- Caption-side: Sets the position of a table caption.
- Empty-cells: Controls the display of borders and backgrounds of empty cells.

9) What is the use of the border property?

Ans: The border property is used to specify the border of a table.

10) What is the use of the empty-cells property?

Ans: The empty-cells property specifies whether the borders and background of empty table cells should be displayed.

11)What is the use of the border-collapse property?

Ans: The border-collapse property specifies whether the borders of adjacent table cells should be collapsed or kept separate.

12)What is the use of the caption-side property?

Ans: The caption-side property specifies the position of a table caption, such as top or bottom.

13)Write the HTML code to create a table containing two students' names and classes.

Ans:

```
<html>
<head>
  <title>Student Information</title>
</head>
<body>
  <table border="1">
    <caption>Student Information</caption>
    <tr>
      <th>Name</th>
      <th>Class</th>
    </tr>
    <tr>
      <td>Aman</td>
      <td>8</td>
    </tr>
    <tr>
      <td>Riya</td>
      <td>8</td>
    </tr>
  </table>
</body>
</html>
```

14)Write the HTML code to create a nested list.

Ans:

```
<h2>My Hobbies</h2>
<ul>
  <li>Reading
    <ul>
      <li>Fiction</li>
      <li>Non-fiction</li>
    </ul>
  </li>
  <li>Music</li>
</ul>
```

This code creates a list inside another list.
