

Chapter 4: More on CSS

A. Multiple Choice Questions

- 1) The property is used to set the distance from each side of an element to the sides of the neighbouring element.
(a) Border (b) Margin (c) Text align
Ans: (b) Margin
- 2) The property is used to define how to break lines.
(a) Line break (b) Sentence break (c) Wordbreak
Ans: (c) Wordbreak
- 3) We use unit to set the font size.
(a) one (b) two (c) four
Ans: (c) four
- 4) Which property in CSS depicts underline, overline, line through of a text?
(a) Text decoration (b) Textstyle (c) Text modify
Ans: (a) Text decoration
- 5) Name the property used to set the thickness of the borderline.
(a) Border Size (b) Border Width (c) Border Height
Ans: (b) Border Width

B. Mention any two properties for each of the following:

1. FONT
Ans: font-family, font-size
2. BORDER
Ans: border-style, border-color
3. TEXT
Ans: text-decoration, text-align
4. MARGIN
Ans: margin-top, margin-left

C. Very Short Answer Questions

1) Which property in CSS defines how to break lines?

Ans: The word-break property defines how words are broken when they reach the edge of a line or container.

2) What does the text-transform property do?

Ans: The text-transform property is used to change the capitalization of text into uppercase, lowercase or capitalize the first letter of each word.

D. Short Answer Questions

1) What is the use of the font shorthand property?

Ans: The CSS font shorthand property is used to specify several font properties in a single declaration. It can set the font style, font size and font family together.

Syntax: font: font-style font-size font-family;

```
p {  
    font: italic 20px Arial;  
}
```

2) What are the different values you can provide with the text transform property?

Ans: The different values of the text-transform property are capitalize, uppercase, lowercase and none.

E. Long Answer Questions

1) Explain Inline CSS along with its syntax.

Ans: - Inline CSS is a method of applying CSS styles directly to an HTML element using the style attribute. It affects only the particular element in which it is written.

Syntax

```
<tag style="property: value;">Content</tag>
```

Example

```
<!DOCTYPE html>
<html>
<head>
  <title>Inline CSS</title>
</head>
<body>
<h1 style="color: blue;">This is a blue heading.</h1>
<p style="color: red;">
  This is a red paragraph.
</p>
</body>
</html>
```

Explanation

- style is the HTML attribute used to apply inline CSS.
- color is the CSS property.
- blue and red are the values.
- The heading becomes blue, and the paragraph becomes red.

2) Explain the Text Indentation property with an example.

Ans: - The text-indent property is used to specify the indentation of the first line of a paragraph or text.

Syntax

```
selector {
  text-indent: value;
}
```

The value can be a length in pixels (px) or a percentage (%).

Example

```
p {
  text-indent: 50px;
}
```

Output: The first line of the paragraph starts 50 pixels away from its normal starting position.

Additional Questions and Answers

CSS Basic Notes

What is CSS?

Ans: - CSS (Cascading Style Sheets) is used to style and design web pages. It controls the **color, font, size, layout, spacing, and appearance** of HTML elements.

Advantages of CSS

- Makes web pages attractive.
- Separates content (HTML) from design (CSS).
- Saves time by using one stylesheet for multiple pages.
- Easy to maintain and update.
- Supports responsive web design.

Common CSS Properties

Property	Example
color	color: red;
background-color	background-color: yellow;
font-size	font-size: 20px;
font-family	font-family: Arial;
text-align	text-align: center;
border	border: 1px solid black;
margin	margin: 10px;
padding	padding: 10px;
width	width: 300px;
height	height: 200px;
display	display: block;
position	position: relative;

A. Very Short Answer Questions

1) What is inline CSS?

Answer: Inline CSS is a method of applying CSS directly to an HTML element using the `style` attribute.

2) Name any four text properties in CSS.

Answer: `text-align`, `text-decoration`, `color` and `text-transform`.

3) What is the use of the `text-decoration` property?

Answer: It is used to add or remove text decorations such as underline, overline and line-through.

4) What is the use of the `text-shadow` property?

Answer: It is used to add a shadow to text.

5) What does the `text-indent` property do?

Answer: It specifies the indentation of the first line of text.

6) What is the purpose of the `line-height` property?

Answer: It increases or decreases the space between lines of text.

7) What is a font family?

Answer: A font family is the typeface used to display text, such as Arial or Verdana.

8) What is a generic font family?

Answer: A generic font family is a group of fonts with similar appearances, such as `serif` or `sans-serif`.

9) Name the four individual margin properties.

Answer: `margin-top`, `margin-right`, `margin-bottom` and `margin-left`.

10) Name the three main border properties.

Answer: `border-width`, `border-style` and `border-color`.

B. Short Answer Questions

1) Differentiate between margin and border.

Answer:

Margin: The space outside an element's border.

Border: The line surrounding the padding and content of an element.

2) What is the difference between font-family and font-size?

Answer: `font-family` specifies the typeface of text.

`font-size` specifies the size of text.

3) Explain the values of text-transform.

Answer:

Value	Function
uppercase	Converts all letters into uppercase.
lowercase	Converts all letters into lowercase.
capitalize	Makes the first letter of each word uppercase.
none	Keeps the original text case.

4) What is the use of the border shorthand property?

Answer: The border shorthand property is used to set the border width, border style and border colour in a single declaration.

Syntax:

```
border: border-width border-style border-color;
```

Example:

```
h1 {  
    border: 2px solid blue;  
}
```

5) What is the use of the font shorthand property?

Answer: The font shorthand property is used to specify several font properties in a single declaration.

Example:

```
p {  
  
    font: italic 20px Arial;  
}
```

This sets the font style to italic, the font size to 20 pixels and the font family to Arial.

6) Explain the different values of the margin property.

Answer: The margin property can take the following values:

- a) `auto` – The browser calculates the margin.
- b) `Length` – Sets a specific margin, such as `20px`.
- c) `Percentage` – Sets a margin as a percentage of the containing block's width.

Example:

```
p {  
    margin: 20px;  
}
```

7) What are the disadvantages of inline CSS?

Ans:

- a) The same style must be repeated for each HTML element.
- b) It is difficult to maintain styles across a whole webpage.
- c) It makes HTML code longer and less organised.

C. Long Answer Questions

1) Explain the different types of CSS.

Answer: There are three main types of CSS:

1. **Inline CSS:** CSS is written inside the `style` attribute of an HTML element. It affects only that particular element.

```
<h1 style="color: blue;">My Heading</h1>
```

2. **Internal CSS:** CSS is written inside the `style` element in the `head` section of an HTML document. It can style multiple elements on one webpage.

```
<style>
    h1 {
        color: blue;
    }
</style>
```

3. **External CSS:** CSS is written in a separate `.css` file and linked to an HTML document. It is useful for styling multiple webpages.

```
<link rel="stylesheet" href="style.css">
```

2) Explain the important text properties of CSS with examples.

Answer: Text properties are used to control the appearance and arrangement of text on a webpage.

Property	Use
text-align	Aligns text horizontally.
text-decoration	Adds or removes text decoration.
color	Sets the colour of text.
text-transform	Changes the case of text.
text-shadow	Adds a shadow to text.
text-indent	Indents the first line.
line-height	Controls the space between lines.
word-break	Controls how words break.

Example:

```
p {
    text-align: justify;
    text-decoration: underline;
    color: green;
    text-transform: capitalize;
    text-shadow: 2px 2px gray;
    text-indent: 30px;
    line-height: 1.5;
}
```

3) Explain font properties in CSS.

Answer: Font properties are used to change the appearance of text on a webpage.

- a) **font-family:** Sets the typeface.
- b) **font-size:** Sets the size of text.
- c) **font-style:** Sets normal, italic or oblique text.
- d) **font shorthand:** Combines several font properties into one declaration.

4) Explain border properties in CSS.

Answer: Border properties are used to modify the border surrounding an HTML element.

- a) **border-width** specifies the thickness.
- b) **border-style** specifies the type of border.
- c) **border-color** specifies the colour of the border.
- d) **border** is the shorthand property for setting these three properties together.

Example:

```
h1 {
    border: 3px dashed red;
}
```
